

## Sentinel WebSite

Sentinel WS (WebSite) is a dynamic content management system that enables creating highly interactive websites, professionalism and efficiency. Administration of Sentinel WS is entirely based on the management of online content.

We say "online management" because all the actions undertaken by site managers Sentinel WS either to modify, add, or remove content is done solely through a web browser (browser) connected to the Internet, ie via the HTTP protocol (Hypertext Transfer Protocol).

Nothing more than that is necessary for the user of Sentinel WS for publishing information on the global network and keep it updated and always fresh. This makes Sentinel WS a powerful tool for disseminating information, Online Marketing, and Internet business.

- You can create, for example:
- News websites
- corporate sites
- Website presence
- Community portals
- e-Commerce and online reservations
- magazines, newspapers and online publications
- Web sites of churches or schools
- Personal and family websites

You can also be created using Sentinel WS systems operating in closed networks (Intranets) to manage internal information (communications, users, etc) from companies or business enterprises.

It is as simple and friendly interface Sentinel WS Administrative, anyone can manage their own Web content without requiring technical knowledge, without knowing HTML, and without recourse to a webmaster every time you need to update this or that thing on a website. All technical aspects of the system are hidden from the common user, and have been solved by the WS Sentinel programmers, making things easier for administrators and content publishers can dispense almost entirely of a technical training specialist.

Where can I use the Sentinel WS system?

Sentinel WS runs on servers and under the supervision of UserMax Network, which, not being an open source system and thanks to the comprehensive security implementations set this up as a robust and secure.

What advantages Sentinel provides to other proposals?

**Flexibility:** The system WAS Sentinel, has such flexibility that allows the implementation of any graphic design. Many other systems require you to observe some structure rigid and inflexible. With our system you should not worry. Display your creativity without limits because it allows Sentinel reality. Sentinel WS works with templates "magic tags" so that you can implement the functionality you want or need on your website with only indicate a simple label. Using CMS systems you hear answers like "we should not, the system is already well" but WAS Sentinel lets you do just másgicas including labels anywhere in the site.

**Security:** We will implement security measures and is monitored 24hs.

**High-Performance Servers:** Sentinel WAS works on servers located in the U.S. high yield and therefore the program guarantees a 99.99% that your website is online and available all the time.

**Development:** By constantly developing new and integrated features that you can enjoy when you need it most.

**Advanced Statistics:** With Sentinel WS you have complete control of who entered your site. Schedules, trends, origins, their advertising campaigns (eg addwords of Google), banners, etc.. So you can set strategic decisions in real time and measure the results of their investments.

**Managing intelligent templates:** As soon as your webmaster will need to make changes in the graph, you will have access to design templates totally clean programming language. Con solo manejar HTML podrá hacer todos los cambios e implementaciones que necesite. With HTML you can just manage to make all the changes and implementations that need.

**Search Engine Optimization:** Sentinel WS position is automatically optimized for search engines so effective because of the possibility of handling dynamic keywords, descriptions of each article and thanks to the management-friendly URLs and URL aliases. Their website quickly and automatically begin to take positions in search results.

**Milti-Language:** With Sentinel you can use on your website up to three or more languages in a dynamic manner, ideal for corporations and institutional web site.
